

3102 – SUSE Linux Enterprise 11 Administration

Vendor Course Code: 3102

Course Length: 5 days

Overview: This course is designed to provide you with a basic understanding of more advanced concepts used in the administration of the SUSE Linux Enterprise 11 Operating system. The skills taught in this class are essential and prerequisite to learning the skills of an entry level Linux administrator or help desk technician in an enterprise environment.

Skills Gained: During this course, you will learn how to complete the following tasks:

- Install, configure, and monitor SUSE Linux Enterprise 11
- Administer processes and services
- Administer storage, user access and security
- Configure the network and remote access
- Manage hardware
- Manage backup and recovery

Key Topics: This course covers a broad range of topics:

- Install SUSE Linux Enterprise 11
- Manage System Initialisation
- Administer Linux Processes and Services
- Administer Storage
- Configure the Network
- Manage Hardware
- Configure Remote Access
- Monitor SUSE Linux Enterprise 11
- Automate Tasks
- Manage Backup and Recovery
- Administer User Access and Security

Target Audience: This course is designed for system administrators who need to become familiar with the Linux operating system. It is also ideal for those who would like to prepare for the Novell Certified Linux Administrator 11 Exam.

Prerequisites: Attendees should have a fundamental knowledge of the Linux Operating System either through attendance at Course 3101 - SUSE Linux Enterprise 11 Fundamentals or other equivalent course.
